# GOVERNMENT POLYTECHNIC, NAGPUR.

(An Autonomous Institute of Govt. of Maharashtra)

# **COURSE CURRICULUM**

PROGRAMME : DIPLOMA IN CM/IT

LEVEL NAME : PROFESIONAL COURSES

COURSE CODE : CM404E<sup>\$</sup>

COURSE TITLE : OPERATING SYSTEMS

PREREQUISITE : NIL

TEACHING SCHEME: TH: 03; TU: 00; PR: 02(CLOCK HRs.)

TOTAL CREDITS : 04 (1 TH/TU CREDIT =1 CLOCK HR., 1 PR CREDIT = 2 CLOCK HR.)

TH. TEE : 03 HRs

PR. TEE : 02 HRs (External)

PT. : 01 HR

#### **\*** RATIONALE:

The course provides the students with an understanding of the basic concepts of operating system and its working. Operating Systems are very essential components of the Computers. It is the interface between the user and the computer system. It is the first piece of software to run on a computer system when it is booted. Its job is to co-ordinate and provides services for the execution of application software. This is core technology subject and the knowledge of which is absolutely essential for Computer Engineers .It familiarizes the students with the concepts and functions of operating system. This subject provides knowledge to develop systems using advanced operating system concepts.

#### **COURSE OUTCOMES:**

#### After completing this course students will be able to-

- 1 Implement the functions of operating systems and the system calls.
- 2 Apply techniques of memory management and file system management.
- 3 Analyse various algorithms based on CPU scheduling, memory management and deadlock.
- 4 Execute the algorithms for Schedulers, Inter-process communications.
- 5 Perform Memory Management techniques.
- 6 Implement the file system and security concerns.

# **COURSE DETAILS:**

# A. THEORY:

| Units  | Specific Learning Outcomes (Cognitive Domain)  | Topics and subtopics  | Hrs. |
|--|--|---|------|
| 1.<br>Introduction<br>to Operating<br>System | <ol> <li>Define various terms related to Operating system</li> <li>State the organization and architecture of OS</li> <li>List various operations of OS and describe their working.</li> <li>List types of system calls</li> <li>Compare various operating systems.</li> </ol>                                     | <ul> <li>1.1 Introduction to Operating System - Organization, Architecture, Operations</li> <li>1.2 Process, Memory, Storage Management</li> <li>1.3 Special-Purpose Systems, Computing Environments, Open-Source Operating Systems.</li> <li>1.4 System Calls, Types of System Calls</li> <li>1.5 System Programs, Operating-System Structure</li> </ul> | 6    |
| 2. Process<br>Management                     | <ol> <li>Describe process scheduling.</li> <li>State various operations on processes.</li> <li>Define Inter process Communication</li> <li>Define thread.</li> <li>Compare multithreading and it's various models.</li> <li>Calculate average waiting time.</li> <li>Evaluate the scheduling algorithms</li> </ol> | 2.1 Process Concept, Process Scheduling, Operations on Processes 2.2 Inter process Communication 2.3 Threads, multithreading model 2.4 Basic Concepts, Scheduling Criteria. Scheduling Algorithms, Algorithm evaluation   | 9    |
| 3. Process<br>Synchronizat<br>ion            | <ol> <li>Define Race condition</li> <li>Define Semaphore.</li> <li>Describe Critical-Section<br/>Problem.</li> <li>State the solution for<br/>Critical-Section Problem</li> <li>State various problems of<br/>synchronization</li> </ol>   | <ul> <li>3.1 The Critical-Section Problem</li> <li>3.2 Peterson's Solution,</li> <li>Synchronization</li></ul>  | 6    |
| 4. Deadlocks                                 | <ol> <li>Define related terms.</li> <li>Identify deadlocks.</li> <li>Describe resource allocation graph.</li> <li>Find safe state.</li> <li>State provision for recovery from deadlock.</li> </ol>   | <ul> <li>4.1 System Model, Deadlock Characterization</li> <li>4.2 Methods for Handling Deadlocks</li> <li>4.3 Deadlock Prevention, Deadlock Avoidance</li> <li>4.4 Deadlock Detection, Recovery from Deadlock</li> </ul>  | 8    |
| 5. Memory<br>Management                      | <ol> <li>Define related terms .</li> <li>Describe swapping.</li> <li>Describe Paging, Paging table.</li> </ol>   | <ul><li>5.1 Main Memory: Background ,<br/>Swapping</li><li>5.2 Contiguous Memory Allocation</li><li>5.3 Paging, Structure of the Page</li></ul>   | 10   |

|            |    | 2/23b                      | Total Hrs.  | 48 |
|------------|----|----------------------------|---|----|
|            |    |                            | Network Threats   |    |
|            |    | 11—60                      | 6.5 Security: The Security Problem, Program Threats, System and |    |
|            |    |                            | Access Matrix, Access Control                                   |    |
|            |    | 1/                         | 6.4 Access Matrix, Implementation of                            |    |
|            |    | 6/10                       | of Protection   |    |
|            |    |                            | Principles of Protection, Domain                                |    |
|            |    |                            | 6.3 Protection: Goals of Protection,                            |    |
|            |    |                            | Management  |    |
|            |    |                            | Methods, Free-Space   |    |
|            |    |                            | Implementation, Allocation                                      |    |
|            |    | problem.                   | Implementation, Directory                                       |    |
|            | 6. | Describe security          | System Structure, File-System                                   |    |
|            |    | access control             | 6.2 File-System Implementation: File-                           |    |
|            | 5. | Compare access matrix,     | Protection  |    |
|            |    | protection.                | Mounting, File Sharing,   |    |
| Security   | 4. | List various goals of      | Disk Structure, File-System                                     |    |
| Security   | 3. | Describe File system       | Access Methods, Directory and                                   |    |
| System and | 2. | Describe related terms.    | Concept,  | 0) |
| 6. File    | 1. | Define related terms       | 6.1 File-System Interface: File                                 | 09 |
|            |    |                            | 5.6 Memory Mapped Files   |    |
|            | 6. | Describe thrashing         | frames, Trashing.   |    |
|            |    | memory problem.            | Page Replacement. Allocation of                                 |    |
|            |    | policy for solving virtual | Demand Paging, Copy on Write,                                   |    |
|            | 5. | Apply Page replacement     | 5.5 Virtual Memory: Background,                                 |    |
|            |    | on segment table.          | 5.4 Segmentation  |    |
|            | 4. | State various operations   | Table   |    |

# B. LIST OF PRACTICALS/LABORATORY EXPERIENCES/ASSIGNMENTS:

| Practic als | Specific Learning Outcomes (Psychomotor Domain)   | Units                      | Hrs. |
|-------------|---|----------------------------|------|
| 1.          | Execute the Disk Operating System (DOS) commands  |                            | 2    |
| 2.          | Install and configure Windows 9x, Windows NT, Windows 2000 & Windows XP Operating Systems.  | Introduction to            | 4    |
| 3.          | Execute the LINUX Commands - man, apropos, clear, ls, mkdir, cd, rmdir, pwd, rm, touch, mv, tr, wc, sort, grep, wall, write, who, chmod, useradd, usermod, kill, ssh, ftp, telnet | Operating System           | 2    |
| 4.          | Develop, debug and Execute a C program to simulate the FCFS CPU scheduling algorithms to find turnaround time and waiting time.   |                            | 2    |
| 5.          | Develop, debug and Execute a C program to simulate the SJF CPU scheduling algorithms to find turnaround time and waiting time.  | D                          | 2    |
| 6.          | Develop, debug and Execute a C program to simulate the Round Robin CPU scheduling algorithms to find turnaround time and waiting time.  | Process<br>Management      | 2    |
| 7.          | Develop, debug and Execute a C program to simulate the priority CPU scheduling algorithms to find turnaround time and waiting time.   |                            | 2    |
| 8.          | Develop, debug and Execute a C program to simulate producer-consumer problem using semaphores.  | Process<br>Synchronization | 4    |
| 9.          | Develop, debug and Executea C program to simulate FIFO page replacement algorithms  |                            | 2    |
| 10.         | Develop, debug and Execute a C program to simulate LRU page replacement algorithms  |                            | 2    |
| 11.         | Develop, debug and Execute a C program to simulate Optimal page replacement algorithms  | Memory                     | 2    |
| 12.         | Develop, debug and Executea C program to simulate LFU page replacement algorithms   | Management                 | 2    |
| 13.         | Develop, debug and Execute a C program to simulate the following contiguous memory allocation techniques a) Worst-fit b) Best-fit c) First-fit                                    |                            | 2    |
|             |   | Skill Assessment           | 2    |
|             |   | Total Hrs                  | 32   |
